ABORTION FUELS FATHERLESSNESS

Today, 24.7 Million (33%) US children live absent their biological father, putting them significantly more at risk for incarceration, poverty, and unplanned pregnancy. But it wasn’t always this way.

Stats show that when a nation legalizes abortion, the rate of fatherlessness doesn’t go down. It skyrockets.

After legalizing abortion, the percentage of US children living with a single mother quickly doubled. The same thing happened in the UK and Canada.

OTHER ADVERSE EFFECTS OF ABORTION

COERCION OF WOMEN
In a 2004 study led by researchers from the pro-life Elliot Institute, 64% of post-abortive women indicated they felt “pressed by others” to have the abortion.²

MEN AND REGRET
Men have no legal say in what happens during an unplanned pregnancy. A 2005 study of post-abortive men found that 52% experience regret when they think about a past abortion.⁵
